

## Banking in 2021

AfCFTA AS AN OPPORTUNITY FOR GROWTH VIA TECHNOLOGY

02

## Via technology, banks have the power to make AfCFTA a success story

By Dziedzom ATOKLO

emember when you had to queue for a long time just to take out money for a business transaction? Yes! Well, that has changed. While the world is battling a pandemic that has left many devastated, the banking industry has thrived like a baby taking all the right vitamins and is more than ready to take your business, my business and every Ghanaian business to the next level in a couple of years.

Through the introduction of innovative ways of doing business using technology, the industry has seen a significant change in addressing issues and growing customer base. The power of technology has many banks, if not all, going digital at different stages.

A 2020 PwC survey shows that majority of banks favour the idea of collaboration with fintech companies as a way of leapfrogging the digital ladder. The survey further reveals that they believe these collaborations would propel industry to where digitised service delivery is commonplace.

On the front of service delivery channels, the banks expect to migrate their customer interactions that currently occur at their brick-and-mortar addresses to mobile platforms. Indeed, this would not be a novel practice in the industry, as a good number of banks operating in Ghana already have robust digital channels that enable their customers to conduct a range of banking transactions on a 24/7 basis. Still, there are some banks that have not sufficiently leveraged the power of digitisation as part of their business model.

In the quest to deepen the role of digital channels, banks have also signalled intentions to innovate around product and service delivery using digital tools. Key amongst which is the mobilisation of customer deposits digitally. The pandemic has underscored the declining role of brick and mortar in banking.

For instance, many banks have noted that customers reduced their inperson patronage of bank services, while an equal percentage reported increased traffic on their digital and electronic touchpoints. In some cases, banks reported 200 percent growth in traffic to their digital platforms. This shows the fast pace to getting many more people banked in Ghana in the nearest future.

## The AfCFTA and banking

The idea of digitisation, using digital tools and harnessing the potential of these platforms to grow the industry has never been ripe till now. While there's the Africa Continental Free Trade Area (AfCFTA) with its secretariat in the heart of Ghana, doing business should be easy right? Banks and businesses will be at the forefront of making this thrive but first, there's the need to be digitised, firm and ready to push the envelope of new things.

The African Continental Free

Trade Area (AfCTA) is an exciting game changer on the African continent as the continent is said to have less than 17 percent intra-continental exports as compared to 59 percent in Asia and 68 percent in Europe.

The pact is designed to create the largest free trade area in the world measured by the number of countries participating. Connecting 1.3 billion people across 55 countries with a combined gross domestic product (GDP) valued at US\$3.4 trillion. It will boost regional income by 7 percent or US\$450 billion and lift 30 million people out of extreme poverty by 2035. Wages for both skilled and unskilled workers will also be boosted by 10.3 percent for unskilled workers, and 9.8 percent for skilled workers.

This calls for a crucial move to have banking systems digitized to make for easier transactions across borders. In this regard, many banks will now have the opportunity of dealing with a number of businesses from micro, small to medium enterprises positioning to have a piece of the AfCFTA cake and willing to make transactions by the click of a finger.

Leveraging the AfCFTA as opportunity for

So, someone in Kenya, can easily make payment to someone in Ghana, through a digital channel introduced by their banks in Kenya in partnership with an affiliate bank in Ghana, not only does that increase the customer base of the said bank in Ghana but pushes this bank to continue to scale up its digitisation process.

## growth through technology It has been proven that 500 million

It has been proven that 500 million Africans are connected to the internet, making it easy to reach them on any front. With the introduction of AfCFTA, the continent becomes a single market, thereby diminishing economic size and fragmentation issues thus creating a seamless mode of transacting business.

So, someone in Kenya, can easily make payment to someone in Ghana, through a digital channel introduced by their banks in Kenya in partnership with an affiliate bank in Ghana, not only does that increase the customer base of the said bank in Ghana but pushes this bank to continue to scale up its digitisation process.

As cited earlier, banks in Ghana are looking to collaborate with fintech companies and these collaborations will open up the banking industry as not only an economy driver but a key player in pushing the AfCFTA through promoting digital skills training, digital channels, providing infrastructural support through offering loans to small businesses at highly affordable rates, these can be realised at a reduced cost of digitisation.

Some industry players agree that digitisation is the way to go, many highlighted a number of things at the Digitisation, Artificial Intelligence and Future of Things: The impact and immense opportunities for Ghanaian businesses' summit organised by Republic Bank Ghana and the Business and Financial Times (B&FT) and key among them is harnessing digitisation beyond the use of social media to scale up businesses and move the nation forward.

CEO of Reset Global People, Kwame Opoku, explained that the Ghanaian business had more to offer beyond social media and further stated that policy and partnership is one of the ways to go.

"If you look at Ghanaian businesses, probably the only area they have sort of taken advantage of is that of marketing by using social media. But there is so much more to digitisation than social media and selling your services online. In terms of infrastructure, the value chain process, faster ways of producing, I believe that there's still a long way to go.

Unfortunately, whether you like it or not, the government will always be crucial in progress. Government will have to play a role - but it starts with policy, and policy is one of the bottlenecks we have. Moving forward, that should be one of the things we look at," he said.

These and many more have made the banking industry one to look out for in this new space and certainly, they are ready to move for growth using the power of technology and AfCFTA. I would say the market is ripe for the taking and the banking industry is a cat with nine lives that has survived major blows and has come out tops, right now, it is the future of the new trade dream of the African continent.

03

# Banks' push for digitization will play a major role in AfCFTA success

By Obed Attah YEBOAH

he banking industry is no doubt essential to every economy's growth and development. No transformation can be done in any country without a solid banking sector. That is why the Ghanaian banking sector has a major role to play in ensuring that businesses are successful in participating in the African Continental Free Trade Area (AfCFTA) agreement.

For the banks to be able to provide that unflinching support, there is the need for them to adopt and adapt to modern technology that will make it easy for businesses to transact across the continent smoothly and with ease. What is more, the new normal has even increased that need for businesses to use digital platforms to meet the demands of their customers and improve efficiency.

Granted, the banking sector in Ghana has shown leadership in this regard. Even prior to the pandemic, most banks had applications that provided certain simple services for customers which brought banking to their doorstep. Clients would have

A successful implementation of AfCFTA would be crucial. In the short term, the agreement would help cushion the negative effects of COVID-19 on economic growth by supporting regional trade and value chains through the reduction of trade costs. In the longer term, AfCFTA would allow countries to anchor expectations by providing a path for integration and growth-enhancing reforms.

ordinarily gone to the banking hall to perform such simple tasks as transferring money from their accounts to another accounts, accessing their bank statements, among other things, thereby, wasting and lot of time and putting pressure on bank staff.

Interestingly, while these digital platforms existed, many customers were still glued to their old ways of doing things – going to the banking halls for the least of tasks.

But when the coronavirus pandemic hit the world and Ghana was also not spared, the fear of contracting the disease from cash, awakened many, especially the educated and elite class, to rethink and accept to do financial transactions via these digital platforms.

Quickly, banks had to reinvent these digital platforms and make it simpler and more user friendly to customers. And that is what is still expected of them as the continent enters a new dawn – the African Continental Free Trade Area.

This is a trade pact which connects 1.3 billion people across 55 countries with a combined GDP valued at US\$3.4 trillion, and it is expected to be one of the key policies which will change the fortunes of the continent forever.

In fact, the World Bank has said that: "a successful implementation of AfCFTA would be crucial. In the short term, the agreement would help cushion the negative effects of COVID-19 on economic growth by supporting regional trade and value chains through the reduction of trade costs. In the longer term, AfCFTA would allow countries to anchor expectations by providing a path for integration and growth-enhancing reforms.

Furthermore, the pandemic has demonstrated the need for increased cooperation among trading partners. By replacing the patchwork of regional agreements, streamlining border procedures, and prioritizing trade reforms, AfCFTA could help countries increase their resiliency in the face of future economic shocks."

With such a big vision, there is no doubt that the banking sector will have to step up their game and come to the aid of businesses, and they can do this by leveraging technology through digitisation.

A recent digital conference organised by the Republic Bank Ghana and the B&FT, underscored the need for businesses and the banking sector to leverage digital platforms as they have come stay forever. Managing Director of the Republic Bank Ghana, Farid Antar, said, like every other crisis, the coronavirus pandemic has provided an opportunity for businesses to be innovative and change their old of way of doing things.

"Every crisis has a silver lining opportunity, and the pandemic has shown us that we can move faster and better. The hope and expectation are that people realise the ease of doing business. For example, a survey was conducted in Europe about how many people would like to go back to the office full time when things get back to normal.

And I think about 60 percent or so said they would not like to go back full time. If you can be as productive and accountable from a remote location, why not? It also saves overhead cost because you don't need physical offices etc. So, it could be a win-win situation if managed well. I hope that when we come back to what we consider to be normal, we don't forget the positive lessons we have learned from the pandemic. And I don't expect we would forget," he said in an interview with the B&FT.

If businesses are to go digital, the banking sector would have to adopt modern technologies that can work together with those digital platforms to provide seamless transactions for local businesses and their foreign counterparts. Therefore, banks must play their role in ensuring that they have invested in the necessary digital infrastructure that businesses participating in the continental pact can capitalize on and perform transactions seamlessly with their counterparts in other African countries.

Therefore, a successful African Continental Free Trade Area cannot happen without robust and efficient bank digital platforms.

## AfCFTA needs industries and banks must be ready to help

By Ebenezer Chike Adjei NJOKU

ollowing the most difficult year in recent history, the rescheduled commencement of the African Continental Free Trade Area (AfCFTA) came into effect, with muted fanfare, as dictated by the

After initial hiccups in having countries ratify the agreement, with manufacturing groups and unions fiercely opposing the agreement, citing a loss of sovereignty, potential for dumping amongst others, the presentation of its potential benefits appear to have won the day.

As part of the African Union's (AUs) 50-year development plan -Agenda 2063 - the pact holds great potential for trade amongst countries on the continent, which has historically been low. A phenomenon often attributed to the fragmentation of the continent, inefficiencies across the board, a frighteningly low rate of industrialisation as well as the stronghold colonial regimes still have over their former colonies.

For context, intra-African exports were 16.6% of total exports in 2017, compared with 68% in Europe and 59% in Asia. By removing trade barriers and allowing the free movement of goods, services, and people across Africa, it is estimated that AfCFTA could help to increase combined consumer and business spending on the continent to \$6.7 trillion by 2030.

Seemingly lost in the conversation about the pros and cons of an Africa-wide free-trade area appears to have been the 'how?'. Little thought, it seems, has been given to the absence of a strong manufacturing base on the continent. What real benefits will accrue to the continent by creating a vast new free trade area if Africans do not manufacture any goods to sell into it?

It is perhaps akin to improving the road networks connecting all markets in Accra, providing adequate vehicles and well-trained drivers, yet, having all the produce sold in these markets coming from the hinterlands outside Accra - where the roads are inaccessible.

## Africa's industrial deficit

Africa, has, unfortunately, for the better part of modern civilisation trailed the rest of the world when it comes to industrialisation. It is for this reason that, despite being home to some of the most valuable extractive deposits, the Manufacturing Value Added (MVA) per capita pales in comparison to the rest of the world.

It is for this same reason that the Democratic Republic of Congo

(DRC), with its vast deposits of unmined cobalt, gold and diamonds has a GDP per capita of just US\$570, whilst Japan's was pegged at US\$40,250 in 2019. It is the very same reason why almost every year, we are reminded that the value of the global chocolate industry is in excess of US\$100 billion per annum, whilst Africa's cocoa-producing countries -Ghana, Cote d'Ivoire, Nigeria, and Cameroon - which produce two-thirds of the world's cocoa, capture just 3% of global chocolate industry revenue.

A report by the United Nations Industrial Development Organization (UNIDO) on African industrial competitiveness, which was published in November 2020, suggests that the average world GDP per capita is nearly six times higher than Africa's. With regards to manufacturing, Africa's share in world MVA is around 2 percent; the average world MVA per capita is almost nine times higher than Africa's.

The continent's trade balance ended 2015 with a deficit of US\$136 billion and this deficit has persisted, with the last observation taken in 2019, showing a trade deficit of US\$81

The report adds, "This negative trend due to recurrent and increasing trade deficits was not the result of a strong growth in consumption and consequently of imported goods; on the contrary, imports registered a slight decline from US\$584 billion in 2012 to US\$547 billion in 2019."

The main reason for the increasing trade deficit is the lack of dynamism in exports. African exports fell from US\$635 billion to US\$465 billion in the period 2012-2019, which was a larger decline than that registered for imports (which fell by 27 percent and 6 percent, respectively).

It is for this reason that we keep seeing food inflation rise unabated; not necessarily due to the rise in prices of imported food or the local currency depreciating, but primarily because local production cannot meet existing demand. Simply put, the negative trade balance in manufactured goods is due to a lack of dynamism in manufactured exports despite a steady decline in manufactured imports.

With this and Africa's low rate of technology in manufacturing, there exists the ever-present danger of 'dumping'. The alarming porous and barely defined borders on the continent threaten the relevance of Rule of Origin (RoO), as imports from outside Africa and easily be relabeled and smuggled across, further undermining AfCFTA.

## The forward match towards industrialisatio

It is evident that the aforementioned low rate of intra-African trade is less as a result of tariffs or regulatory barriers, though they exist and will be addressed by AfCFTA, rather, but because African countries are not industrialised enough to produce the tradable goods and services to meet demand on the continent.

Despite the gloomy picture painted, however, data suggests that industrialisation on the continent is on the ascendancy, albeit at a very slow pace. A working paper by researchers at the United Nations University (UNU-WIDER), titled 'A manufacturing renaissance? Industrialization trends in the developing world', show an industrial renaissance over the last

decade, in 18 sub-Saharan African countries - which are responsible for 75% of the region's GDP.

To truly consolidate these gains, there must be some concerted efforts. On the local front, initiatives such as the One District One Factory (1D1F) and Planting for Food and Jobs (PFJ) must transcend rhetoric and tokenism, with verifiable progress reports readily made available at specified periods. Having suffered historically from our inability to maintain well-intentioned initiatives, we must be intentional and dispassionate in measuring our key

Secondly, emphasis must be placed on logistics. Just like in the example of road networks from markets in Accra, earlier cited, the reverse would equally be as bad. It would remain painfully difficult, if not impossible, to trade across the continent if inadequate infrastructure makes it expensive or impossible to do

In third place, the benefits of specialisation must be drummed home. Rather than a scatter-gun approach that would have resources invested in the manufacturing of products where the requisite expertise is lacking, nations must adopt strategies of playing to their strengths and attaining better levels of efficiency. This should also lead to improved partnerships and associations by different local (and cross-border) stakeholders.

## The role of finance and digitalisation

The role of finance in the industrialisation of individual countries and the continent at large cannot be overstated. Whilst specialiased institutions such as the impending Development Bank will seek to provide targeted finance to budding industries, all hands must be on deck. By utilising ever-increasingly efficient technology solutions such as artificial intelligence, commercial banks and other lenders can better advance credit to Industry. Improved payment and settlement platforms would also serve as one of the most important infrastructural interventions for

Borrowing a not-so-subtle analogy, a large free trade area without locally produced goods to sell into it is like a gun without bullets from a development perspective.

There is the clear and present danger of raising the banner of AfCFTA whilst we are stuck in a cycle of serving as conduits and dumping grounds for the marketing and trading items from beyond the shores of Africa, thus defeating the very purpose of the agreement.

Whilst not a straight path, flanked by roses, it is one we can largely determine for ourselves, failing to do so, we will be left with our hands between thighs, as we might not even have a bowl to beg

## AfCFTA: How prepared are our payments services and systems?

By Joshua Worlasi AMLANU

or the banking system to adequately play its expected role under the African Continental Free Trade Area (AfCFTA), it would need to drive value creation by developing new technologies, scaling its payment infrastructure and methods to a pan African level to serve the diversified economies on the continent.

The system, which has been a steady anchor of the financial sector, became the cornerstone of the success story so far in handling the socioeconomic effects of the coronavirus pandemic, proving that the banking industry is ready to take on the liberalization process under the AfCFTA, through the facilitation of transactions, mobilizing savings, allocating capital funds and monitoring managers so that the funds allocated will be utilised as envisaged, as well as managing risks.

Although cash remains the most commonly used payments system, digital and electronic payments are being used more and more across the continent. Cross-border payments are almost exclusively digital.

Payments cover a range of financial products and services – at the retail end, from point-of-sale systems, to online payments gateways, remittance services, mobile money transactions, bill payments, wire transfers, credit and debit cards, and electronic funds transfers. On the commercial side, business to business transactions, inter-bank payments and treasury services all cross borders. Payments services encompass all the services needed to transact a payment – including processing, clearing and settlement.

Already, Ghana and Nigeria have made steady progress with the integration of payment systems, as part of the implementation of an integrated payment system of West African States. The technical level of integration has been completed, and currently what remains is the stage to synchronize the settlement of currencies exchanges during transactions.

Data from the Ghana Interbank Payment and Settlement Systems Limited (GhIPSS) shows that a total of GH¢254 billion was transacted through its system during 2020, representing a 16 percent increase compared to the GH\$219 billion in 2019. Despite the economic fallout from COVID-19 pandemic, there has been an accelerated adoption of digital payments as witnessed in the surge in e-payments volumes. At the end of 2020, a total of 77 million transactions were processed across all platforms, compared to the 38 million transactions processed in 2019, representing a 103 percent increase.

This signifies a major leap in the adoption of digital payment systems across the different platform being operated in the country.

In 2020, the real-time portfolio comprising GhIPSS Instant Pay, Mobile Money Interoperability (MMI), Proxy Pay, GhQR, among others, recorded significant growth, closing

the year with the strongest performance. The major contributor to this performance was MMI; processing a total of 43.9 million transactions, representing a 367 percent increase from nine million transactions processed in 2019.

Despite the state of the economy in 2020, the clearing house recorded a nine percent increase in transaction value from GH¢209 billion in 2019 to GH¢229 billion.

e-zwich transactions declined by three percent from 10.7 million transactions in 2019 to 10.4 million in 2020. gh-link transactions also declined by 17 percent from 900,000 transactions in 2019 to 800,000 transactions in 2020. Despite the decline in transaction volumes, the value of transactions increased. The value of e-zwich transactions increased by 43 percent from GH¢6 billion in 2019 to GH¢9 billion in 2020.

Following the positive gains made in the payment space, and the growing uncertainty about the future of the world, post the COVID-19 pandemic, the World Payment Report 2020 predicts that non-cash transactions would grow by US\$ 1.1 trillion by 2023.

Part of GhIPSS's strategic objective for 2020 was to drive adoption and usage of its real time payments services and expand the portfolio for same. In view of this, the Proxy Pay and GhQR services were launched and rolled out in March last year.

Ghana is currently seeing a growing adoption of non-cash payments among individuals. In order to consolidate the gains made in 2020, GhIPSS intends to continue to pursue the cashlite Ghana Agenda by deepening usage of existing digital payments platforms while exploring other opportunities.

GhIPSS intends to partner with institutions to extend the use of the ACH NRT, Proxy Pay, GIP Payment Gateway and the GhIPSS Corporate Suite to corporate institutions. These

services will provide corporate institutions with efficient payment options.

Late last year, the Afreximbank, in collaboration with the African Union and some African central banks launched a Pan – African Payment and Settlement System (PAPSS), which is a central financial market infrastructure to support payment arrangements to expand the international trade of African States, and to facilitate economic and financial integration of Africa.

PAPSS will connect the entire continent and handle instant payments in multiple African currencies and provide a settlement mechanism that creates trust within the ecosystem. This brings two critical changes to Africa's trade finance: minimizing the use of hard currencies in trade payments, and domesticating payments and settlements within Africa. This, in turn, will help organizations and their financiers manage currency risks better.

According to the National Payment Systems Strategic Plan (2019-2024), the final integration of West African states payment systems will be implemented by the end 2022. GhIPSS is expected to introduce a scheme to link the National Switching and Processing System - gh-LinkTM with other West African countries.

Africa's financial services sector will also be relied on to provide the credit and support necessary for certain industries to move forward particularly the infrastructure and manufacturing sectors, which will be at the centre of Africa's development goals.

The AfCFTA would expand market access for Ghana's exporters of goods and services, spur growth and boost job creation, eliminate barriers against Ghana's products, provide a Dispute Settlement Mechanism for stopping the hostile and discriminatory treatment

directed against Ghanaian enterprises, safeguard the Ghanaian economy from dumping and unfair trade practices and support the industrial policy, among

AfCFTA can contribute to the development of sound, effective and efficient payments systems and payments services in several ways. Services will be better able to proliferate across the continent if barriers to cross-border operation are reduced via the AfCFTA, while greater integration can be achieved via the regulatory commitments in the AfCFTA. At the same time, increased trade because of the AfCFTA will create greater demand for payments services, and thus could provide the impetus for improving existing infrastructure.

Commitments made under the African Continental Free Trade Area agreement (AfCFTA) will also shape national policy. This is particularly the case for services, where countries often lack coherent policy. The commitments made at the continental level can set the direction of national policy or provide the political impetus for changes.

## Barriers to the expansion of payments services and cross-border payments

Payment providers can have difficulty providing services cross-border for several reasons. There can be trade barriers that manifest in domestic regulation, such as discriminatory treatment of foreign providers, the requirement for local incorporation, prohibitions on cross-border services or limitations on the movement of capital. There are also infrastructure barriers – the actual transmission of money from

one country to another may be difficult either because of the cross-border connection or the payments system in either country.

The most troublesome barriers to the greater integration of payments systems and the expanded provision of payments services are the regulatory barriers including licensing and capital requirements.

Except for cash payments, all cross-border payments require electronic messaging and thus, the cross-border flow of data is essential to the functioning of cross-border payments. Payment systems and services rely upon telecommunications, so to the extent the AfCFTA can create conditions for improved telecommunications infrastructure, this will also support the development of payments systems and services.

Along with guaranteed access for payments services providers, countries should commit to guaranteed access to payments infrastructure – including national payments services, clearing and settlement systems, ATM networks and credit or debit card schemes, in a non-discriminatory way.

This is particularly important where, as often is the case, the system proprietary to one or a group of providers. This would allow a payments provider from one country to provide payments services seamlessly in another African country. This goes beyond market access commitments and may require countries to make commitments on self-regulatory organisations or licensing requirements.

There are already various regional payments systems in place in the RECS – including the East Africa Payment System (EAPS) and the SADC Regional Integrated Settlement System. These systems are designed to make cross-border payments easier, and less reliant on correspondent banking arrangements which can be slow and costly.

## Conveniently pay for Government Services through any Standard Chartered Branch

We have integrated our platforms with GHANA.GOV, the digital revenue collection service from the Government of Ghana. This solution allows our clients to make payments to a variety of government agencies using the Straight2Bank online platform, or through our branches.

Pay all taxes and custom duties, Passport application fees, Tourism levies, Greater Accra MMDAs New Business Operating Permits, Public Procurement Authority fees, National Information Technology Agency fees, Data Protection Commission fees and more.

For a full list of government ministries and agencies, visit: www.ghana.gov.gh

For more information you may contact your designated Relationship Manager or our Client Services team for straight2bank.gh@sc.com or via our telephone lines at +233-(0)302 633427/8/9.

standard chartered

Standard Chartered's digital innovations strongly poised to help clients tap into the benefits of AfCFTA

tandard Chartered Bank Ghana PLC has been pushing the digital innovation agenda since 2015 in a bid to fulfill the bank's determination to provide the best digital lifestyle for clients. This deliberate and sustained commitment to simplify banking for clients to seamlessly transact virtually at any time birthed Africa's most robust banking application, SC Mobile, a full digital bank on mobile in February 2019 and in addition to the equally seamless business banking platform, Straight2Bank.

With the commencement of the African Continental Free Trade Area (AfCFTA) which is a gamechanger in the expansion of intra-African trade coming into play, individuals, business and governments can fully and comfortably tap into the benefits by leveraging the array of innovative tools and services from Standard Chartered.

As a bank, we play a key role with services and products by enabling businesses to operate in Africa. The main ingredient of this is the pace of delivery and variety of financial options. Through digital channels, the Bank offers banking services such as onboarding of clients in 15 minutes and up to 70 of the most common service requests on the SC Mobile App without having to visit a physical branch. These are vital for any business in Africa.

Standard Chartered can enable leveraging of AfCFTA for clients in the provision of banking services across the entire continent. With SC Mobile, clients can bank-on-the-go by transacting card-less cash transfers, performing local and international fund transfers, investment, market insights and products.

One of the innovative solutions that Standard Chartered offers corporate and business clients is the tailor-made and award-winning "Straight2Bank" online banking platform that provides several payment options and solutions to corporations in the market. Straight2Bank provides clients with a single online platform for payments to tax agencies, suppliers and

vendors (cash management), letters of credit (trade services), bank guarantees and other services.

Clients receive world class automated reporting that is often customized to meet their needs with a universal adaptability capability. This and other solutions offered by the bank address the challenge of seamless reconciliation and reporting which is key for businesses. Recognizing that clients are at various stages of the digital journey, the bank makes available a very wide range of integration options such that clients can seamlessly transact online even from the early stages in their digitization

At Standard Chartered, we have what it takes and are confident in our advisory capabilities and the ability to provide innovate relevant and efficient solutions to guide clients to efficiently make the right trade and investment decisions to fully tap into AfCFTA.

## **UBA** offering unparalleled trade and settlement products and services

efore the ratification of the African Continental Free Trade Area Agreement (AfCFTA) with African countries, the United Bank for Africa Ghana had taken lead to strategically offer unparalleled Trade and Settlement products and platforms to push the trade agenda in Africa and beyond.

The AfCTA agreement, if successfully implemented will create a single African market of over a billion consumers with a total GDP of over \$3 trillion. This will make Africa the largest free trade area in the world.

Strongly represented in 20 countries, UBA is driving the trade and SME space with three innovative offerings: UBA Connect, AfriTrade

and Africash to help businesses and individuals to perform their transactions across Africa with ease.

These platforms have helped to facilitate trade and payments for crossborder transactions within Nigeria, Ghana, Benin, Cote d'Ivoire, Liberia, Sierra Leone, Senegal, Burkina Faso, Guinea, Gabon, Chad, Kenya, Uganda, Tanzania, Zambia, Mozambique, Congo DRC, Congo Brazaville, Cameroon and Mali.

UBA Connect is providing cross border payment with ease and serving as payment and settlement system for members of the Africa Continental Free Trade Area (AfCFTA). With 42 currencies on the continent, this system provides a platform for movement of funds with ease. So under UBA

Connect, any UBA customer can walk to the counter of any UBA branch in another country and draw cash as though they were in their home countries.

With UBA serving as the importer and exporter bank, UBA AFRITRADE affords businesses and individuals the convenience of making payment in their local currencies, Euro and US dollars either by paying into a UBA account, through letters of credit, Francophone availed drafts, bills for collection, export proceed collection or simple documentary cross border funds transfers.

Under UBA AfriTrade, a customer in Ghana can make payment to their business or trading partners in any of the 20 countries where UBA operates and the partner would receive the funds in their local currencies. No need to worry about Forex conversion and loss.

Afri-Trade is promoting a lot of businesses especially SME's in Ghana across most francophone countries because once the buyer pays the CFA to UBA the receiver in Ghana receives it in Cedis. Also you don't have to even go through exchanging into dollars neither do you have to move from here before you can buy from another country.

As a leading Pan-African bank, UBA's proprietary remittance service, Africash, is designed to provide an efficient payment system for the booming and largely informal trade activities within the African Regions as

well as provide a platform for settlement of imports and exports within Africa.

With Africash, customers can initiate or receive money from any business office or partner location in their local currency instantly after transfer has been effected.

The UBA Trade and Settlement platforms namely: UBA Connect, AfriTrade and Africash supports the realization of the Sustainable Development Goals (Goal 17), as these services are significantly providing the financial platform to increase exports among developing countries to strengthen the means of implementation and revitalize the global partnership for sustainable development and also make the AfTCA dream work.

## **TESAH 2020 BANKING SECTOR PERFORMANCE REVIEW**

### **DEVELOPMENTS IN BANKS' BALANCE SHEET**

## ASSETS STRUCTURE (%) 8.3% 9.4% 7.2% 7.3% 7.7% 27% 29.6% 40.3% 39.2% 43.1% 40.2% 35.8% 28.7% 30.1% 28%

OTHER ASSETS

INVESTMENTS

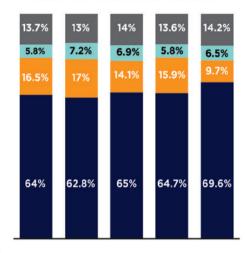

2020.

Net advances formed the larger proportion of the asset mix until 2018 where investment began to dominate. The sharp growth in total investments in 2018 was largely due to the special resolution bonds issued to Consolidated Bank Ghana (CBG). Investment

Covid-19 pandemic on banking activities in

holdings increased in 2020 as banks move to less risky assets i.e. GoG securities as a result of the pandemic-induced elevated credit risks.

### LIABILITY STRUCTURE (%)

Deposits remained the main source of funding for the industry, with its share increasing from 64.7% to 69.6% between 2019 and 2020.

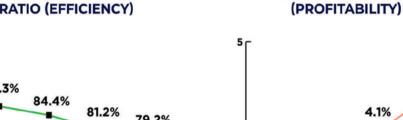

### KEY FINANCIAL SOUNDNESS INDICATORS AND MARKET SHARE ANALYSIS

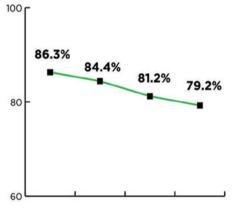

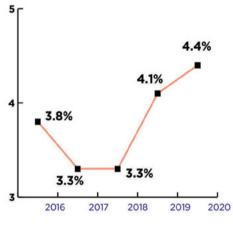

## TOTAL COST TO GROSS INCOME RATIO (EFFICIENCY)

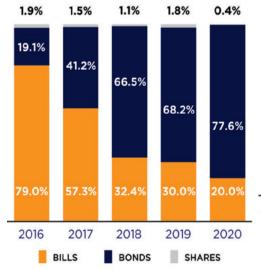

MARKET SHARE OF

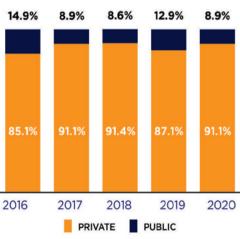

TOTAL LOANS

**RETURN ON ASSETS** 

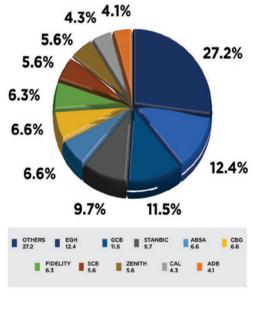

## COMPONENTS OF BANKS' INVESTMENTS

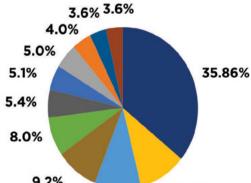

## COMPONENTS OF BANKS' LOAN PORTFOLIO

### MARKET SHARE OF TOTAL DEPOSIT

10.4%

Although investment holdings of banks increased in 2020, the structure of their investment portfolio remained largely the same. The movement towards longer dated instruments which led to an increase in the share of securities in total investments from 1.1% in 2018 to 1.8% 2019 was reversed in 2020 to 0.4%. Banks' appetite for GoG securities remain strong as they reduce the size of their loan books in response to the risks presented by the

pandemic on banking activities.

Credit growth slowed in 2020 from 25.7% in 2019 to 4.6%.

This was occasioned by the outbreak of the pandemic and its resultant effect on businesses and loan repayments.

Private sector credit still constitutes the larger proportion of credit in the banking sector. Its share increased to 91.1% in 2020 from 87.1% in 2019, while the share of public sector decreased to 8.9% from 12.6% over the same period.

Agricultural Development Bank	3.10	14	17
Republic Bank Ghana	3.15	15	11
United Bank of Africa	3.40	16	13
First National Bank	3.45	17	16
Bank of Africa	3.55	18	14
First Bank of Nigeria	3.70	19	20
Universal Merchant Bank	3.90	20	19
Prudential Bank	4.06	21	21
OmniBSIC	N/A	N/A	N/A
National Investment Bank	N/A	N/A	N/A

The bank performance evaluation rankings were based on the financial statements released by the banks for FY 2020. The rankings focused on twenty-one (21) out of the twenty-three (23) commercial banks in Ghana, as the financials of OMNIBSIC and National Investment Bank were unavailable at the time of the analysis.

The rankings emanated from an assessment of the credit worthiness and performance of the banks using the CAMEL framework ie; capital adequacy, assets size, management capability, earnings and liquidity.

Zenith Bank, Standard Chartered Bank and EcoBank Ghana were the top three (3) banks with strong performances in the year under review. On the contrary, First Bank of Nigeria, Universal Merchant Bank and Prudential Bank were the least ranked banks based on the CAMEL components.

## Banks have a responsibility towards SMEs to make AfCFTA successful

By Wisdom JONNY-NUEKPE

ne of the successes of the African Continental Free Trade Area (AfCFTA), according to experts, would depend largely on how small-

scale businesses are able and ready to improve financial service delivery leverage technology in its entirety to through technological platforms, as scale up and meet output demands within the trade area.

This has become even more important as the COVID-19 pandemic has made it easier for banks and other financial institutions to strengthen and

part of the new normal.

Even before the ratification of the AfCFTA and the arrival of the pandemic, banks and other financial institutions have been considered as key players in the successful implementation of the agreement particularly in the various member states who signed to the policy.

Despite the many touted benefits of the AfCFTA, experts have said banks participation and willingness to support SMEs through various financial channels including financial

technology (FINTECH) cannot be underestimated.

In this vein, it behooves on banks to have a certain level of responsibility toward the success of the initiative.

Access to finance has been identified as a dominant constraint facing SMEs in Ghana, as a World Bank study found that about 90 percent of small enterprises stated that credit was a major constraint to new investment with a corresponding

## Banks have a responsibility towards SMEs to make AfCFTA successful

Continued from page 15

limited access to financial resources compared to larger organizations. This leads to their low growth and development.

This stems from the perception of higher risk, information barriers,

and the higher costs of intermediation for smaller firms as most small businesses fail in their first year due to lack of support from government and traditional banks in Sub-Saharan Africa.

As small and medium-sized enterprises are the backbone of the Ghanaian economy – they represent about 85 percent of businesses, largely

within the private sector, and contribute about 70 percent of Ghana's gross domestic product (GDP).

With most of these enterprises ticking access to finance as the most significant obstacle which hinders their growth, banks must begin to relook at the sector with realistic lending rates in order to deepen support for these businesses.

With the minimal gains made by government through policies to support the sector, a lot still needs to be done by banks and financial institutions towards SME financing, if AfCFTA would have an easy route to success. Failure and the non-support from financial institutions

to the sector, could hinder success in the participation of the intra-Africa trade projections.

While calling on banks to support SMEs particularly in Ghana to help realize the goals of the trade area, the AU Trade & Industry Commissioner has indicated that a study is currently underway to see how small-scale cross-border traders can be mainstreamed into the AfCFTA.

This is vital because it will

## The big tech risk in finance

By Juan Carlos CRISANTO & Johannes EHRENTRAUD

inancial regulation hasn't caught up with risks posed by big tech firms; it's time for a policymaker rethink. Large technology companies such as Alibaba, Amazon, Google, and Tencent—"big techs"—are coming under policymakers' spotlights, and political momentum is growing for new competition and antitrust legislation.

As big techs expand their financial offerings, these efforts are particularly relevant for financial authorities: the current regulatory framework could fail to contain the risks these new business models bring to the financial sector.

A new policy approach is needed that takes into account the unique features of big techs—such as their vast scale, ample customer base, and access to large amounts of data—and captures the risks from the significant interconnection among different entities within a big tech group and the broader financial system (Crisanto, Ehrentraud, and Fabian 2021).

Big tech's involvement in finance started with payments, and they now have a substantial market share in some countries. In China, for example, big tech firms had by 2018 already processed payments equivalent to 38 percent of GDP (FSB 2020). They soon expanded to other sectors, such as credit provision (particularly consumer financing and microloans with shorter maturities), banking, crowdfunding, asset management, and insurance (see Table 1).

Geographically, big techs' expansion into financial services has been more pronounced in emerging market and developing economies than in advanced economies for several reasons. One reason is that less financial inclusion in emerging market and developing economies may increase demand for big tech services, particularly by unbanked and underserved populations (FSB 2020)

## A varied and growing presence

Big techs provide their financial services either in competition with traditional financial institutions or in partnerships that use existing products and infrastructure. Some big techs provide only the customer-facing interaction. Others also hold minority stakes in financial institutions outside their groups.

Financial services still play a small role in these companies' business models, but this could change rapidly—for four reasons:

The network effect: Once a big tech has attracted a sufficient number of users, network effects kick in, accelerating its growth and increasing returns to scale. Every additional user creates value for all the rest. The more users a platform has, the more data it generates. More data, in turn, provide a better basis for data analytics, which enhances existing services and thereby attracts more users (BIS 2019).

Gatekeeping: Significant network effects may enable big techs to become gatekeepers for certain types of services. This may include control over who can enter the market, who receives what kind of data, and how the market operates. This allows them to leverage their dominant position in a given market to exert influence over its functioning.

Captive users: With a large and captive user base built through extensive customer networks and coupled with the low cost of acquiring customers over the internet, big techs can scale up quickly in market segments outside their core business. For example, it took money market fund Yu'e Bao 20 months to reach 100 million users; Ant Financial's Sesame Credit got there in only 11 months (Citi GPS 2018)

(R&D) spending of big techs dwarfs that of many banks.

For example, the annual average R&D spending (2017–19) by JPMorgan Chase was \$11 billion, compared with Amazon's \$20 billion. Amazon, Apple, and Google now account for 3 of the global top 10 companies by R&D expenditures (IBFed and Oliver Wyman 2020).

## The regulatory landscape

With the newcomers knocking at the gates, financial authorities are seeking a balance that supports big techs' benefits while minimizing their potential risks to the financial system.

Although the overall impact of big techs' entry into financial services is still unclear, these firms have the potential to make the

Juan Carlos CRISANTO

>>>The Writer is the deputy chair at the Financial Stability Institute of the Bank for International Settlements.

Financial authorities may struggle to understand and stay current with big techs' continuously evolving business models. Meeting this challenge calls for a clear picture of the services big tech entities provide both locally and across borders (including as service providers to financial institutions), how these services are offered (for example, through partnership with other financial institutions or their own licensed entities, or as "matchmakers"), and how big techs monetize data.

### **Technological investment:**

Big techs devote significant resources to developing and acquiring state-of-the-art technologies, particularly data analytic capabilities. After all, access to large troves of data generates value only if it is matched by the ability to analyze it. Research and development

financial sector more efficient, improve customer outcomes, and aid financial inclusion. This may, however, put financial stability and consumer protection at risk and presents challenges for competition, data privacy, and cyber security.

Financial authorities are seeking a balance that supports big techs' benefits while minimizing

Johannes EHRENTRAUD

>>>The Writer is senior advisor at the Financial Stability Institute of the Bank for International Settlements.

their potential risks.

Big techs operating in finance are already subject to a combination of specific financial industry regulations that apply to banking, extending credit, and transmitting payments and to general laws and regulations on data protection and competition.

Big techs and their subsidiaries that provide financial services must hold the appropriate licenses for specific regulated activities. Big techs that provide financial services through partnership or joint ventures with financial institutions, however, do not usually need licenses.

With respect to cross-industry regulations, jurisdictions take different approaches to banks, nonbank financial institutions, and nonfinancial entities, including those within big tech groups. Broadly speaking, even where these types of entities face exactly the same requirements, they may be subject to different levels of supervision of their

## Africa's trade revolution needs peace

By Hippolyte FOFACK

he African Continental Free Trade Area (AfCFTA), which came into effect in January, could be a game changer in helping to lift the continent out of poverty and onto the path of long-term prosperity. The AfCFTA has the potential to accelerate and alter the composition of foreign direct investment in Africa, thereby diversifying the continent's sources of growth and boosting its internal and external trade. And merging Africa's relatively small markets into one of the world's largest will enable investors to capitalise on greater economies of scale.

But Africa risks squandering this huge opportunity unless its leaders can address the continent's unwelcome reputation as one of the world's most conflict-prone regions. According to the World Bank, nine African countries currently suffer from high institutional and social fragility; 12 are engaged in medium or highintensity conflicts. Unsurprisingly, the number of conflict-related deaths in the region has surged from 2,200 in 2010 to an average of 14,000 per year since 2014. Transnational terrorist networks have recently intensified the problem.

Besides causing untimely deaths and suffering, and destroying infrastructure, conflicts impede economic activity and undermine formal and informal cross-border trade. Informal trade between Mali and Algeria, for example, has fallen by more than 64% since 2011 - largely owing to the conflict in northern Mali and closure of the two countries'

The negative impact of wars on trade can be long-lasting. Globally, violent conflict is estimated to cause a 26% reduction in exports in the year that hostilities begin, rising to 35% five years later and 58% after a decade. Across Africa, where the median duration of conflict is about four years, the negative spillovers of wars on trade could persist in the medium- and long-

High-intensity conflicts also hinder trade and economic integration indirectly by triggering a sharp rise in military expenditures. African military spending grew by 17% over the last decade, to US\$41.2billion in 2019, according to the Stockholm International Peace Research Institute. In a region where large government financing gaps already inhibit investment in productivity-enhancing infrastructure, this diversion of scarce resources can have a significant adverse long-term impact on economic development, because it undermines the diversification of sources of growth needed to alleviate supply-side constraints and to align domestic production and demand.

In recent years, especially in the Sahel, governments have shifted their resource allocation markedly from development to security. While that swing can be explained by the frequency of high-intensity conflict, sluggish development can itself stir up grievances that undermine security. The subordination of development goals to short-term security considerations also fuels corruption which in turn drives horizontal inequality and intensifies resentment, creating conditions in which conflict and deprivation lock countries into a downward spiral of intergenerational

Most would attribute China's four decades of rapid growth and poverty reduction primarily to successful economic reforms, but these achievements can also be viewed as the dividends of a peaceful and secure domestic environment. Likewise, Ethiopia's strong economic growth since the mid-2000s has shown that mutually reinforcing defence and development objectives in Africa can attract both domestic and foreign private capital, helping to overcome the supply-side constraints which currently dog many of the region's economies.

One great benefit of a more peaceful Africa would be increased continental trade, which currently accounts for only 15% of the region's total trade and is dominated by scarce manufactured goods, owing to most countries' continuing dependence on commodity exports. In addition, sustained long-term investment will accelerate the diversification of sources of growth and trade to mitigate the risk of recurrent balance-of-payments crises associated with commodity-price

The AfCFTA's success in deepening African economic integration thus hinges on creating the right conditions for long-term security. Only lasting peace will guarantee lasting prosperity. If policymakers can complement economic and democratic governance reforms with similar improvements to the judicial system and security sector - emphasising accountability and the protection of citizens, then the dividends in terms of conflict prevention will be even

Encouragingly, a growing number of African countries are settling their political differences through diplomacy and the rule of law, not the barrel of a gun. Some judiciaries have been greatly empowered and are increasingly exercising their independence. One noteworthy example was the decision by Malawi's constitutional court to annul the result of that country's 2019 presidential election in light of substantial poll irregularities; the rerun in June 2020 resulted in a victory for the opposition candidate.

Governance reforms are also likely to have positive spillover effects for Africa's institutional stability and regional integration. Although integration is, at its core, a political project, its success is contingent on policymakers recognising that the process is too important to be politicised. Greater institutional stability and predictability will curtail the risk of disruption to and discontinuity in regional integration during political transitions.

"There will be no development

without security and no security without development," the late, great former United Nations Secretary-General and Nobel Peace Prize winner Kofi Annan once said. "And both development and security also depend on respect for human rights and the rule

Rebalancing Africa's security and development objectives is a daunting task. But it is one the region's leaders must seize with both hands in order to realise the AfCFTA's enormous

## Banks have a responsibility towards SMEs to make

Continued from page 18

facilitate SMEs growth, personnel training and product marketing. This will enable small businesses to make returns, manage their accounts, and legally register their businesses and pay taxes, all of which allow them to access capital from financial institutions.

AfCFTA successful

The agreement is also building a mechanism to report non-tariff barriers, which disproportionately

impact MSMEs due to their limited resources and access to information.

Through this move, SMEs are expected to tap into the regional export destinations and leverage on the AfCFTA to eventually expand into overseas markets.

A call to action, would be for Ghanaian SMEs that seek participation in the AfCFTA to organise and educate members on how to be successful in relation to access to finance bystanders in this new African initiative.

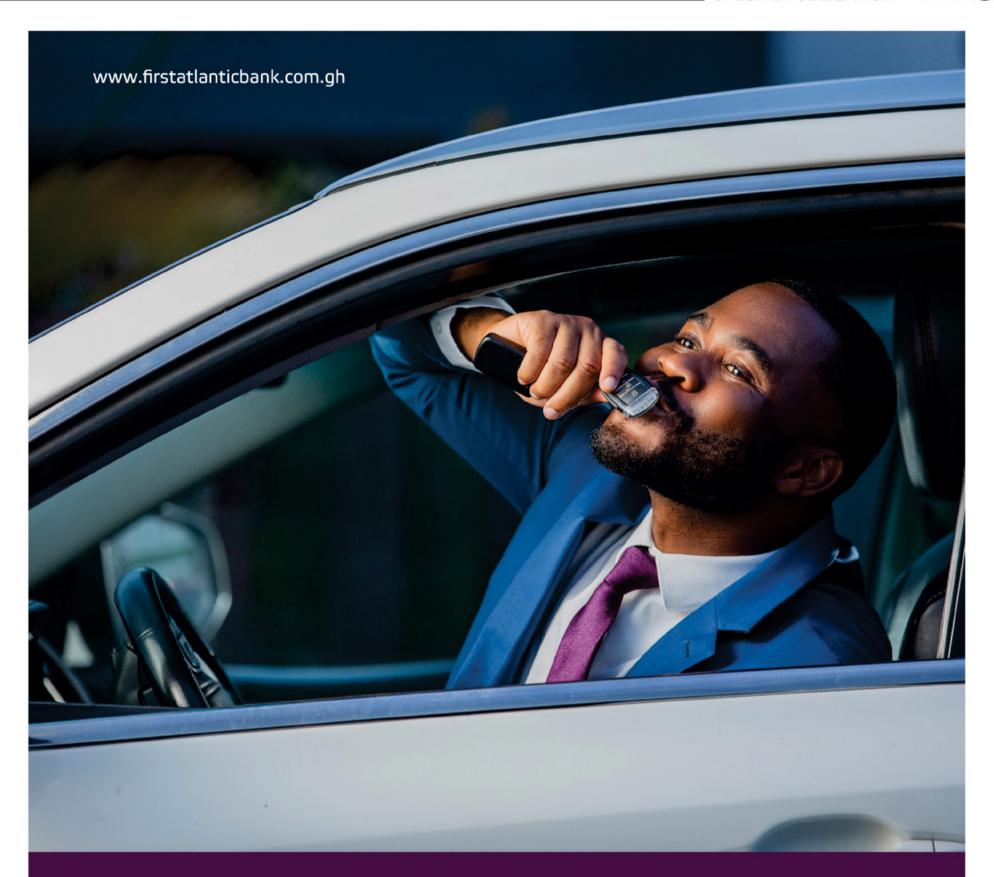

Ghanaian entrepreneurs must also raise awareness and initiate campaigns on how they can benefit from the agreement, and what measures and policies are needed to ensure they have a place within the agreement.

SMEs must also provide their own leadership, as they cannot afford to wait for others to lead them. With their chosen leaders and with a common voice, they can then begin to engage with the AU, African governments and trade bodies, holding them accountable for the implementation and regulation of the AfCFTA to ensure that it works as intended for all Africans.

Access to finance has been identified as a dominant constraint facing SMEs in Ghana, as a World Bank study found that about 90 percent of small enterprises stated that credit was a major constraint to new investment with a corresponding limited access to financial resources compared to larger organizations. This leads to their low growth and development.

... refreshingly different!

## Are mobile operators the next fintech startups?

By Eric OSIAKWAN

frica's leading Mobile Network Operators (MNOs), MTN, Vodacom and Safaricom, have recently made bold plans to venture into the increasingly dynamic world of fintech.

On 23rd June 2021, Safaricom launched its super app, which creates an ecosystem of mini apps from the network operator as well as third party apps that feed off the super app<sup>1</sup>.

A month prior to this development, Safaricom, the leading MNO in Kenya announced plans to release an Application Protocol Interface (API) for the super app to enable third-party app developers to build more products and services on top of the super app<sup>2</sup>. This means the super app is going to be an app store that consolidates the reach of

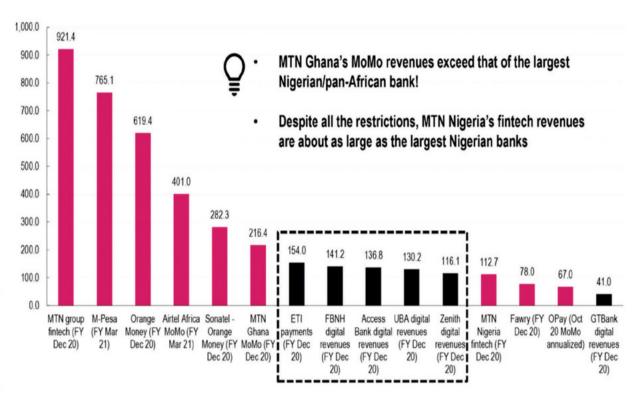

In May, MTN also announced plans to become a tech platform to rival the likes of Apple and WeChat as part of their Ambition 2025 which is currently being implemented3. MTN, Africa's leading telecom operator, is developing its Ayoba messaging platform into a super app that would include its Mobile Money (MoMo) application and video and music streaming services, largely inspired by the international success of WeChat, a powerful multi-purpose messaging, social media and digital wallet app. In April, Vodacom CEO sat down with CNN to discuss plans for building a super app in South Africa in partnership with Alipay. The new service will be integrated with Vodapay to create a financial services super app that will let users pay utility bills, transfer money and get connected with online merchants and suppliers<sup>4</sup>. Although the partnership with Alipay was announced last year during the pandemic to bring the much-needed digital services to consumers under lockdown, it has taken almost a year for them to bring the service to life5. This suggests that becoming a fintech startup is easier said than done.

In March, Liquid Telecom with operations in different African countries rebranded to Liquid Intelligent Technologies to show that it is now a one-stop-shop technology group<sup>6</sup>. Very soon, the company would also launch a super app to allow consumers to access all its services through one platform.

Although Orange, another MNO with operations in 18 African countries has not announced a super app, the company's launching of Orange Bank Africa last year, in addition to their already existing Orange Money service, seems to play into the super app narrative. Airtel Africa has also not announced a super app although they had stella performances last year in the MoMo and data business.

Super apps act as a single point of entry for multiple consumer functions. The model emerged in Asia and allows a user to access a range of services — banking, ride-hailing, communication, hiring, trades, people, etc — all from within one

African mobile money businesses generating more revenues (\$mn) than SSA banks payments businesses

app<sup>9</sup>

Back in 2019, Cellulant from Kenya, a leading African fintech firm, also announced plans to launch a super app called Tingg<sup>10</sup>.

Super apps are trending not only in Africa. There is a global race to create the next super app that would rival the likes of WeChat, which has a billion users and now estimated to offer more than one million mini programs created by third parties. The other main player is Ant Group's Alipay, which also has more than one billion users and offers 120,000 mini apps by third parties<sup>11</sup>.

WeChat, owned by Tencent, the most valuable publicly-traded company in China, began making inroads in Africa in 2013 via South Africa's Nasper, an early strategic investor in WeChat's parent company. WeChat's foray into Africa failed, with the company quietly exiting in 2017<sup>12</sup>.

Given that WeChat's partnership with Nasper did not guarantee success, time would tell whether Alipay's partnership with Vodacom would be successful. In 1994, Naspers, Koos Bekker and other partners launched MTN, which is currently Africa's largest MNO<sup>13</sup>.

Major MNOs are all eager to become nimble fintech startups to compete with the agile young tech ventures, which begs the question, can old dogs learn new tricks?

The answer could be yes because the MNOs have led the innovation in MoMo dating back to 2007, when Safaricom ushered in M-Pesa, a pioneering MoMo app into the Kenyan market, leading to a remarkable digital payment and mobile banking revolution across the entire African continent.

Today, all major MNOs have MoMo operations, which has become their new cash cow to the detriment of the banks. In some markets such as East Africa, the MNOs, including Safaricom, are operating "banking services" directly competing with traditional banks.

In Nigeria, this has not been the case until the 3rd quarter of 2020, when the Central Bank of Nigeria (CBN) issued final approval to Glo, 9Mobile and Unified Payment subsidiaries to operate as Payment Service Banks (PSBs)<sup>14</sup>.

In parts of West Africa, the banks, including Fidelity Ghana and Ecobank Ghana, managed to lobby the regulators to "force" the MNOs to work with them to deliver those banking type services.

Back in East Africa, the question has been asked, "Is M-PESA transforming into a bank" with the launch of its super app 15? This question has led regulators and public

policy makers in some countries to require the MNOs to separate their MoMo operations (classified as fintech) from their mainstream voice business.

In some markets, the companies are also required to make some ownership of their fintech ventures available to the public through listing on the local stock exchange, just as they are mandated to list their voice businesses. In Kenya, there is a bill before parliament requiring the separation of M-PESA from Safaricom as a standalone fintech business<sup>16</sup>.

The MoMo operations of the MNOs made the most significant returns under the pandemic because majority of transactions were done through their networks 17. Nigeria recorded \$428B worth of e-transactions

in 2020, 42% higher than in 2019. In Ghana, MoMo transactions outstripped cheques by \$40B in the first quarter of 2021<sup>18</sup>. This sent shock waves to the Ghanaian banking sector such that the banks are now forging collaborations as they fear for their future <sup>19</sup>.

In other news, Ghana is edging towards a state-backed digital currency to mitigate against the volatility of unregulated digital currencies, such as bitcoin (BTC)<sup>20</sup>. The value of M-Pesa transactions in Kenya grew by 32.9% year-on-year to \$82B in 2020, whilst the volume of M-Pesa transactions grew by 14.9%, to 5.12 billion transactions.

Orange's MoMo service also saw an 18.9% increase in active users to total 19.6M customers by the end of June 2020<sup>21</sup>. In Kenya, MoMo payment rate represents 87% of the country's GDP; in Ghana the figure is 82%. These are the highest ratios in the world after China where mobile transfers represent 125% of GDP (this includes person-to-person transactions not included in GDP calculations)<sup>22</sup>.

On the contrary, South Africa where Vodacom and MTN reside, have not seen that much success with mobile money mainly because that country has a solidly entrenched banking system, with 70% of adults having a transaction account<sup>23</sup>.

Earlier attempts by both operators to introduce MoMo in South Africa failed but in February 2020, MTN relaunched its MoMo service with UBank and in December 2020, with the mobile telecom giant claiming 2 million new customers.

Vodacom's new Alipay app is their second attempt to carve out a fintech niche in South Africa, whilst Discovery Bank and Tyme Bank have launched exclusive digital offerings without the telcos. Things are clearly playing out quite differently in Southern Africa.

Given that the MNOs are in a fist fight with the banks with regards to fintech, would the banks also seek to become innovative mobile startups now that the MNOs are becoming fintech startups?

Anthony Akindele Ogunranti - MD/CEO, Zenith Bank Ghana Limited

anuary 1, 2021 was a great day for Africa. Following a coronavirus-induced delay, the African Continental Free Trade Area (AfCFTA) came into full effect. It is the flagship project of the African Union's Agenda 2063, a blueprint for attaining inclusive and sustainable development across the continent over the next 50 years.

It is loosely modeled after the 1994 update of the General Agreement on Tariffs and Trade (GATT), the precursor to the World Trade Organization (WTO), and much has been said about the potential impact of the agreement.

Whilst some critics have pointed to a number of deficiencies in individual countries and the continent at large, the enormous potential of the agreement to see the centuries-long transformation of the continent in a few decades far outweigh any current deficiencies and serves is serving as a much-needed impetus for various stakeholders.

When fully operational by 2030, the region could be the world's biggest free-trade zone by area, with a potential market of 1.2 billion people and a combined gross domestic product of US\$2.5 trillion and according to the World Bank, an Africa-wide free-trade pact could boost the continent's income by some US\$450 billion and lift 30 million people out of extreme poverty by 2035.

As with any transformation, there will invariably be winners and losers, coupled with great uncertainty. It is at such time that stakeholders; governments and businesses multinationals and Micro, Small and

Medium-sized Enterprises (MSMEs) need strong institutions. They require organisations with a proven track record of innovation, sustainability, and resilience to represent their best interests.

## The Role of Zenith Bank

For more than two decades, Zenith Bank has been at the forefront of digital banking; providing best-in-class customer products and services by applying cutting-edge Information and Communication Technology (ICT) solutions, scoring many firsts in the process.

Zenith's experience in the area of technology, coupled with its physical presence in West Africa (Ghana, Gambia, Sierra Leone, Nigeria) as well as correspondent banks and digital presence in various countries on the continent, serves as the solid foundation upon which it is erecting pillars to best serve businesses to make the most of AfCFTA. These pillars are:

## 1. Education and sensitisation

With regards to international trade, there are various protocols and rules such as the Protocol on Trade in Services, Rules of Origin (RoO), Delivery Ex Quay (DEQ), Waiver of Obligations, Protocols on Investment, Intellectual Property Rights, Competition Policy amongst others. The understanding of these and many other concepts represents one of the

## Zenith Bank Making trade under AfCFTA easier through digitisation

biggest challenge businesses, particularly, smaller businesses that have had limited direct exports will face in their quest to benefit from

Acutely aware of the possibilities of exploitation due to lack of knowledge, Zenith Bank has embarked on a series of aggressive sensitisation drives for potential direct stakeholders. With access to a wealth of experts, who have excelled in their respective spheres of discipline, Zenith has leveraged technology to make these sessions available, even to persons who are geographically distant.

The Bank has partnered with the Ghana Export Promotion Authority (GEPA) for the Authority's regional sensitization tour with exporters and other business on the opportunities of AFCFTA and the support the Bank can provide in the areas of lending opportunities, provision of trade products such as Letters of Credit, export Letters of Credit, Bills for collection, etc.

The Bank has additionally collaborated with GEPA to educate customers on the Authority's Impact Hub (i.e. a one-stop shop on all services of AFCFTA and other export information).

Customers of the Bank have additionally benefited from the Bank's webinars on the opportunities that AFCFTA presents

As a result, complex concepts have been distilled into easy bite-sized pieces of information, with very relatable examples from the existing cultural contexts. The response has been overwhelming. Zenith Bank will not relent on this initiative. The Bank will also provide tailor-made advisory services to both customers and non-customers, until the dynamics of AfCFTA become common knowledge.

## 2. Payments and Settlements

Payments and settlements remain a bane in international trade and AfCFTA is no exception. This is especially true in an area like that of AfCFTA, where there is no common currency. With the local regional bloc, ECOWAS, announcing that the proposed common currency for the region, the ECO, would be in force in 2027, it is safe to assume that the problem of various currencies and finding a consensus on payment will exist in the short to medium term, and perhaps, even longer.

With its extensive coverage and by leveraging in-house digital solutions as well as in collaboration with strategic partners, Zenith's solutions are instrumental in supporting businesses, particularly SMEs, to overcome the many challenges presented by the highly fragmented and complex payment and banking infrastructure. Its cross-border payment and settlement solutions would see business partners receive payments in the currency of the choice - cedis, naira, CFA Franc, USD, British Pounds, Yen, amongst others.

The Bank's web-based online collection platform and marketplace, Zenith GlobalPAY, enables businesses to sell their products and receive payments from customers across the continent and the world via payment cards such as Visa or Mastercard. Users can trust the high level of security on this platform; every transaction between merchants and buyers are secured.

Zenith Bank's Point of Sale (PoS) terminals also conveniently enable businesses to receive payments from visitors from other countries to Ghana through the use of their Mastercard or Visa cards. Zenith POS terminals also allow for either of the following verifications: Biometric, PIN, and signature. Merchants can be assured of real-time settlement, great reduction in cost of handling cash and a 24-hour accessibility when they sign up for a Zenith PoS terminal.

For corporate customers of the Bank, the Zenith Corporate Internet Banking platform (CIB) provides a safe channel for all electronic banking transactions from the comfort of the home or office. Users can log in and carry out their business transactions at any time of the day. The platform gives users a variety of payment options which include card payments, instant transfers as well as e-wallet and direct debits. There is also no limit to the number of times transfer can be made. A special feature is also enabled to allow for the setup of multiple signatories' approval for all or some amounts of payments. Irrespective of the location of signatories, they can log in to Zenith Bank's CIB platform and approve payments. The most critical feature to note about Zenith CIB is the two-factor authentication that requires additional verification beyond account login details. This has been put in place to guard against instances where login details may be compromised.

## 3. Transparency and Security

There exists the clear and present danger of increased incidents of illicit financial flows under the guise of AfCFTA. With it comes the likelihood of more intense scrutiny of payments that occur on the continent.

To curtail this, key departments of

the Bank carry out the necessary due diligence to prevent the likelihood of unlawful trade activities. The Bank's Foreign Operations department thoroughly ensures all inflows received are backed by the required documentation before accounts are credited.

Zenith Bank's Trade department also ensures all foreign transfers and trade transactions are backed by the requisite supporting documents before any transactions are effected.

The Compliance Department of the Bank has the mandate of scrutinizing all account opening documentation to ensure they meet global Anti-money laundering and KYC standards.

Driven by a culture of excellence and strict adherence to global best practices and good corporate governance, Zenith Bank is committed to ensuring that all payments made through its platforms are religiously scrutinized and verified. The introduction of high-tech solutions will accurately ensure that the falsification of documents and other anomalies are detected at the first presentation and duly referred to the appropriate quarters.

## 4. Access to credit and market

Ask small businesses what tops their list of wishes and it is often access to credit. Whilst not oblivious to the desires of businesses and having done much in this regard, financial intermediaries have been constrained by the largely informal nature of small businesses and, hitherto, the pitiable bookkeeping.

Knowing that credit does not only allow businesses to grow their supplier base, but it also allows them to grow demand, Zenith has rolled out and will continue to deploy the technology of tomorrow to enable businesses to gain access to more credit, as it obtains more data on customers and suppliers. These tools will also prove vital in linking businesses with the ideal customer base.

As we enter into uncharted waters for trade on the continent, especially off the back of the debilitating socio-economic impact of COVID-19, conventional wisdom suggests that businesses are guided by what is historically proven and Zenith Bank is that and much more.

Zenith Bank Ghana is a subsidiary of Zenith Bank Plc with its Head Quarters in Lagos, Nigeria. It has presence in Sierra Leone, The Gambia, United Kingdom, Dubai as well as a representative office in China

# Making AfCFTA work for start-ups and inovation hubs

By Yaw ADU-GYAMFI & Paulina ADJEI

he African Continental Free Trade Area (AfCFTA) agreement has created the largest free trade area in the world measured by the number of participating countries. The agreement links 1.3 billion people across 54 countries with a joint gross domestic product (GDP) valued at US\$3.4 trillion.

According to the World Bank, it has the potential to lift 30 million people out of extreme poverty but achieving its full potential will depend on putting in place significant policy reforms and trade facilitation measures.

To achieve the economic transformation, it is necessary to stimulate private sector investment on the continent with an economy that is 80% informal and dominated by women and the entrepreneurial drive of African youth who continue to be a driving force of innovation in

At the point of operationalizing AfCFTA in the year 2020, COVID-19 set in and caused major disruptions to trade across the continent and global supply chain systems including opportunities for women and youth. By increasing regional trade, lowering trade costs and streamlining border procedures, full implementation of AfCFTA would help African countries increase their resiliency in the face of future economic shocks and help usher in the kinds of deep reforms that are necessary to enhance long-term growth.

## AfCFTA, Women and Youth in Ghana

Women and youth led start-ups incubated at innovation hubs in Ghana are integral to the effective implementation of AfCFTA. This is explained by insights from grassroot focus group discussions and survey of start-ups and innovation hubs towards engagement on the framework agreement across the country.

In Ghana, young entrepreneurs continue to set up and lead start-ups operating in the services, agribusiness, design and digital innovations. With targeted interventions, these potential trade opportunities can be well positioned to overcome low productivity, exploit

scale economies, and use the continental market as a stepping stone for expanding into overseas markets, including through continental supply and global value chains.

Women participation in AfCFTA is outlined in the objective of the preamble to the Framework Agreement. With expected employment gains expected in agriculture and agro-food processing where women represent about half of the labour force, increasing market size presents more opportunities.

## AfCFTA Engagement with Start-ups and Innovation Hubs

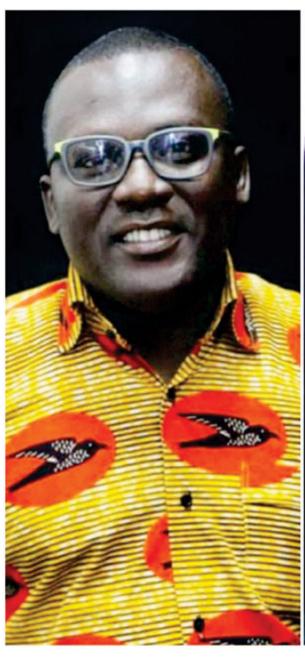

Start-ups and innovation hubs need to understand the operational standards, procedures and trade regulations associated with the AfCFTA. This will empower local SMEs to assess the trade and leverage on export opportunities afforded by the agreement and the wider market offers.

Innovation hubs provide an avenue for entrepreneurs to incubate their new ideas, set up start-up businesses, develop relevant skills and technologies to scale. Some of the key strengths of innovation hubs lie in their adaptive and incorporative ability around concepts and skills in digital technologies, design thinking, and lean management harnessed for building the capacity of start-ups. These concepts will be particularly useful for start-ups as they are being encouraged to take advantage of the AfCETA

to take advantage of the AfCFTA.

Across the country, hubs and start-ups provide grassroot insights and serve as agents at the core of development due to their visibility and relevance at the community level helping to shape the narrative around the effective implementation of AfCFTA. Based on grassroot insights, new discoveries will inform public discourse and interventions to maximise the benefits of the agreement.

## The Prospects of AfCFTA

Yaw ADU-GYAMFI & Paulina ADJEI

Yaw ADU-GYAMFI is a PhD Researcher, and Social Entrepreneur (yagyamfi@gmail.com)

Paulina ADJEI is a Development Advisor (pauline.adjei@gmail.com)

AfCFTA offers a lot more prospects for start-ups and innovation hubs in diverse ways. In a survey with hubs and start-ups on how the landmark agreement can be of benefit; partnership potentials, increased exports and income emerged as the top three opportunity areas. Start-ups and Innovation hubs play key roles in providing solutions, jobs, skills development and business incubation services and so with AfCFTA providing an avenue for startup founders to develop new skills that enable trade in products and services across borders, and more importantly the fact that solutions from these businesses will have access to a bigger market to trade other than their countries of origin and eventually more income. Innovation hubs on the other hand have the opportunity through AfCFTA to leverage technology for skills development in collaboration with partners across the continent and thus create a pool of entrepreneurs and solution providers capable of driving the agenda of integration in Africa through trade in products and services.

## Constraints to implementing AfCFTA

AfCFTA does not relieve businesses

of the responsibility in pursuing strategic actions in areas such as financing, product development, marketing and branding to consciously take advantage of the inherent opportunities the agreement presents.

In order to achieve the benefits of the AfCFTA, there is a need to address constraints which restrict trade across the continent. Among the key constraints, inadequate access to appropriate financing instruments (grants, equity and debt), infrastructure (payment systems, stable internet and affordable power) and relevant skills in trade facilitation, business development and technologies stood out

Therefore, there is a need to address the constraint at multiple levels across Ghana to foster regional integration and effective implementation of the trade agreement.

### Recommendations

In response to addressing the constraints and maximising the prospects of trade agreement for startups and small businesses, the following are recommended:

AfCFTA City Desk - dedicated and localised support for start-ups and small businesses

Digital Atlas - a repository of AfCFTA ready businesses, their products and services

AfCFTA Accelerate - a step-bystep support for start-ups to scale their

### Conclusion

In conclusion, we would like to reiterate the need to target women and youth led businesses with the prospects of AfCFTA and to build capacity to address constraints.

By setting up AfCFTA City Desks at strategic points within the innovation hubs across the country in partnership with the Government of Ghana through appropriate ministries and agencies such as Ministry of Trade (MoTI) and the Ghana Standards Authority (GSA), AfCFTA secretariat, private sector and development partners can provide one stop information to start-ups with regards to standardisation, certification, relevant skills and information to take advantage of the trade agreement. Without this, startups and small businesses led by young people and women will lag and not experience the benefits of the continental agreement as envisaged.

Additionally, a key component in making the AfCFTA work for startups and innovation hubs in Ghana is by developing robust payment platforms and access to a mix of financing (grant, debt and equity) to boost trade.

Additionally, through the development of an AfCFTA digital atlas, information can be provided on who has and needs what to achieve seamless implementation.

Note: ✓ Provision of financial service through big tech entity and/or in partnership with financial institutions outside big tech group in at least one jurisdiction;  $\checkmark$ \* Launch expected in 2021. The core activity of an entity engaged in banking is taking deposits, though regulations vary across countries.

Continued from page 22

business practices. Finally, depending on the national setup, there could be a multitude of authorities responsible for enforcing cross-industry regulations, each with its own mandate and policy objectives.

Of 11 big techs that provide banking, credit, and payment services in different regions, 4 have majorityowned entities in their group that hold banking licenses; none, except in China, are licensed to grant credit (without taking deposits), but operate in partnership with other institutions: and all have entities in their group that hold payment licenses in at least one jurisdiction (see Table 2).

## Risks not fully captured

The current policy approach around the globe does not pay due attention to the unique features of big tech business models and the corresponding risks. Finance-specific and cross-industry regulations are geared toward individual legal entities within big tech groups for the particular activities they perform. The business model of big techs, however, involves a variety of services provided under a wide range of modalities, which be tough for policymakers.

Financial authorities may struggle to understand and stay current with big techs' continuously evolving business models. Meeting this challenge calls for a clear picture of the services big tech entities provide both locally and across borders (including as service providers to financial institutions), how these services are offered (for example, through partnership with other financial institutions or their own licensed entities, or as "matchmakers"), and how big techs

monetize data. The lack of transparency of big tech groups and the multitude of regulators overseeing different aspects of big tech operations just make things more complicated.

A second set of hurdles involve the unique characteristics of big techs, which typically include numerous group entities. These perform highly interrelated activities, making it particularly difficult for authorities to assess their risk profile. Three types of risk stand out:

- Partnerships with incumbents can dilute accountability and promote excessive risk-taking when big techs provide only the customer-facing layer of the value chain and do not bear any underwritten risks themselves. Without any skin in the game, big techs may be less inclined to screen and monitor clients, and the interests of big techs and the financial firms involved may not be fully aligned.
- A big tech group has many different entities that depend on each other in different ways. A problem in one part of the group can stir up trouble for another part if contagion and reputational risks materialize.
- Financial stability risks can arise from the concentration and dependence on critical thirdparty services, such as data storage, transmission, and analytics, big tech companies provide to other financial institutions, particularly in the context of a cyber event or operational failure.

A third group of challenges has to do with the current financial framework's ability to respond swiftly and effectively to big techs rapidly becoming systemically important, even in areas where their operations appear relatively modest at present.

## A new policy

approach for big techs The risks posed by big tech business models are not comprehensively dealt with under the existing financial regulatory framework. Authorities may decide to enhance

the current framework and consider

Recalibrating the mix

the following policy options:

of entity-based and activity-based rules: An activity-based regulation can complement, but not replace, entity-based regulation. Different types of institutions may generate different risks when performing the same activity. Big tech business models involve a bundle of very different activities-ecommerce, payments, cloud services-each of which gives rise to a specific set of interrelated risks. The

characteristics of big techs matter for how they should be regulated, and developing more entity-based rules for big techs in specific regulatory areas, such as competition and operational resilience, seems prudent (Carstens 2021; Restoy 2021). Introducing a

bespoke policy approach for big techs: The unique features of big techs may warrant a comprehensive public policy approach that focuses not only on individual big tech entities and their activities but

also on how individual big

within the platform tech entities work together in the background to provide services to their customers on the big tech platform. Such a specialized approach must establish objective criteria that qualify a firm as "big tech"—which could prove

difficult given their differences—and monitor and mitigate the systemic component resulting from the combined activities of a big tech firm. More information on big tech groups is mission-critical to achieve these goals. Enhanced disclosure of financial and nonfinancial information would give authorities a comprehensive understanding of their domestic and crossborder operations; the nature and extent of the risks involved; and the links between entities within the group, external financial institutions, and the

Enhancing local and international

financial system as a whole.

Brazil

Note: ■ Market presence in partnership or joint venture with other financial institutions; ✓ Big tech has an entity within the group that holds a financial license: Big tech offers financial services both through partnerships or joint ventures with other financial institutions and has an entity within the group that holds a financial license; 🗸 Shareholding of big techs in these banks is below

B = banking license. For the European Union and United Kingdom, CRD credit institution; for Hong Kong SAR, authorized institution; for Brazil, central bank approval under Resolution 4.122/2012 and Circular 3.649/2013; for the United States, national bank charter or state-level bank charters (commercial banks, savings banks, trust companies). C = credit license. For Hong Kong SAR, money lender license; for the United States, nonbank lender license (state level); for Brazil, Sociedade de Crédito Direto or Sociedade de Empréstimo entre Pessoas; for China, internet microlender or consumer finance license. P = payments license. For the European Union, payment institution or e-money institution; for Brazil, Instituição de pagamento; for the United States, money transmitter, sale of checks, money services business (governed primarily by state law); for China, third-party payment license. The analysis excludes cases in which payments are made and/or credit is extended for purchasing products and services exclusivel

The analysis excludes cases in which payments are made and/or credit is extended for purchasing products and services exclusively

supervisory cooperation: In light of the cross-sectoral and crossborder nature of big tech activities, increased emphasis on cooperation and coordination at the local and international levels is imperative. Cross-sectoral and cross-border cooperation between national authorities-including at the very least financial, competition, and data protection authorities-would be a practical step in this direction.

It's time for policymakers to rethink the current policy approach. This includes contemplating a comprehensive public policy approach that better integrates financial regulation with competition policy and data privacy. It's been said that it's better to build a fence at the top of a cliff than have an ambulance waiting at the bottom. Now is a good time to consider what that fence
